July 1, 2015 • Volume 35 Number 26 • www.jneurosci.org

Cover legend: This sagittal section shows the regeneration of mouse corticospinal tract axons (red) 7 months after *Pten* deletion was initiated in motor cortex. *Pten* deletion was initiated 1 year after spinal cord injury in this mouse. Green labels glial fibrillary acidic protein. For more information, see the article by Du et al. (pages 9754–9763).
