March 4, 2015 • Volume 35 Number 9 • www.jneurosci.org

Cover legend: Neighboring neurons in layer 2 of a single barrel of vibrissal somatosensory cortex have heterogeneous receptive fields. Receptive field color denotes the whisker that best drove responses for each neuron, and the size corresponds to sharpness of tuning. For more information, see the article by Clancy et al. (pages 3946–3958).
