

Cover legend: This image displays a dense localization of fluorescently labeled perineuronal nets (green) around mouse hippocampal CA2 pyramidal neurons (red) and proximal neurites. Perineuronal nets are stained with *Wisteria floribunda* agglutinin, CA2 neurons are labeled using a mouse line expressing EGFP under control of the *Amigo2* promoter (Gensat). Nuclei are stained with DAPI (blue). For more information, see the article by Carstens et al. (pages 6312–6320).
