THE JOURNAL OF NEUROSCIENCE

November 23, 2016 • Volume 36 Number 47 • www.jneurosci.org

**Cover legend:** Crows and other birds can process numerical quantity. A neuronal correlate for sensory representation and working memory for a broad range of visual numerosities have been identified in the nidopallium caudolaterale, a higher association brain area, in crows. For more information see the article by Ditz et al. (pages 12044–12052).
