

Cover legend: This image shows a layer 3 pyramidal neuron and surrounding inhibitory axon terminals in the monkey anterior cingulate cortex. Pyramidal neurons (green) were labeled using whole-cell patch-clamp and intracellular filling techniques, and immunohistochemical staining of vesicular GABAergic transporter positive (VGAT⁺) was used to visualize axon terminals (magenta). For more information, see the article by Medalla et al. (pages 4717–4734).
