SEE YOU IN WASHINGTON, DC
NOVEMBER 11–15
Our latest TRIO micromanipulator uses a combination of new mechanical designs and software algorithms to allow the motors to power down completely during recording. This has the benefits of reducing the electrical noise in the system to unmeasurable levels and keeping the motors cool, which eliminates thermal drift. The stability and low noise characteristics of the TRIO manipulator will save you time and effort by being one of the most robust components in your setup.

- Quiet linear resolution
- 25mm travel in all 3 axes
- Sub-micron resolution
- User selectable angles
- Compact ROE controller
