

Cover legend: This watercolor, inspired by the drawings of Ramón y Cajal, shows an oligodendrocyte ensheathing two axons, accompanied by illustrations of the different maturation stages through which the oligodendrocyte progenitor cells pass before becoming mature, myelinating oligodendrocytes. The GTPases R-Ras1 and R-Ras2 are essential regulators of oligodendrocyte development and myelination. Drawing by Daniel Belchi. For more information, see the article by Sanz-Rodríguez et al. 2018. (pages 5096–5110).
