**Cover legend:** Immunohistochemistry for the myelin proteolipid protein (PLP, green) in the mouse cingulate cortex and adjacent corpus callosum at postnatal day 60. DAPI is shown in blue. This technique was used to analyze the expression of myelin proteins and the postnatal myelination of conditional KO mice in which the transferrin receptor gene was specifically deleted in oligodendrocyte progenitor cells. For more information, see the article by Cheli et al. (pages 3614–3629). Cover image: Pablo Paez and Veronica Cheli.
