*Cover Picture:* A multipolar hippocampal neuron grown in dissociated culture and stained with an antibody against glutamic acid decarboxylase (GAD). The neuron is Gad positive and appears to be encrusted with GAD-containing axon terminals.  $\times 2000$ . Micrograph kindly provided by Dr. Maria T. Caserta.

Instructions to Authors appear in the January issue only. Copies of the Instructions can be obtained by writing the Society for Neuroscience, 11 Dupont Circle, N.W., Washington, DC 20036, Suite 130.
