Cover picture: Cross section through the midbrain of a New Zealand albino rabbit. Without staining, this photograph is produced by using the wet section (on a glass slide) as a negative in a photographic enlarger. The method was first described by Guzman-Flores, Alcaraz, and Fernandez-Guardiola (1958). Photograph by William H. Jordan. Kindly submitted by Brett E. Polenchar and Michael M. Patterson, Ohio University.

Note: In the legend accompanying the cover illustration for the February issue of the Journal, the address of Drs. Michael A. Kirby and Paul D. Wilson was mistakenly given as the Department of Psychology, University of California, Davis. Drs. Kirby and Wilson are in fact in the Department of Psychology at the University of California, Riverside. We apologize for this misattribution.
