**Cover Picture:** A great horned owl (*Bubo virginianus*). The ears of this owl, in contrast to those of the well-studied barn owl, are symmetrically oriented in the vertical plane. The great horned owl has a map of auditory space in its inferior colliculus that encodes only the azimuth of a sound source. Photograph taken by Brian Rasnow, California Institute of Technology, and provided by the authors, S.F. Volman and M. Konishi, from their paper (pp. 3083–3096, this issue).
